FOR IMMEDIATE RELEASE:

ENERGY SAVINGS FOR THOSE WITH ALTERNATIVE FUEL CAPABILITIES

NEW ROCHELLE, NY– January 11, 2001 -- **UtiliSave, LLC**, the nation's leader in utility data management and cost recovery services cites that in the current market, the cost of burning oil is much cheaper than the cost of burning gas. This is a big change from last year's energy market.

What does this mean? For those properties fortunate to have oil as an alternative fuel, it pays to make the switch **NOW**.

Building owners or operators that can burn residual or heating oils should be switched over already. To find out when to burn gas or oil, there is a quick rule of thumb. Take the price of #2 oil per gallon and multiply it by .7194. This will yield you the equivalent price of natural gas. If you can burn #6 oil, multiply the price per gallon by .6666 add 5% for handling, line heating loss, etc. This will yield the price to compare with what you are paying for natural gas.

"Individuals responsible for purchasing energy should be alerted to the distinct possibility that their utility provider may now be less expensive than energy their power marketer is offering to them," said consultant George Drosdowich, Director of Client Relations at UtiliSave, LLC. "Many purchasers have no way of knowing what savings (or losses), they are really racking up when buying gas and electricity from a marketing company. Purchasers need unbiased advice. There is a distinct danger in the current market in giving in to the temptation to fix your price now only to pay dearly for it for the next 12 to 18 months," he added.

In today's fluctuating and confusing marketplace, business and property owners need professional auditors to validate their bills and qualified energy analysts to help them navigate the deregulated market. Energy regulation and markets is an area where the cost of developing the expertise in house is high and the learning curve is steep. It pays to develop a relationship with qualified experts. Aside from gas, other utilities are coming in at nearly 4 times the cost of last year, so paying the least amount possible makes good business sense.

About UtiliSave

UtiliSave, LLC provides integrated utility cost management, cost recovery, and e-commerce procurement solutions to high end-users of electric, gas, water/sewer, steam, oil and telecommunications. Cost Recovery Audits are performed on a contingency fee basis and Energy and Telecommunications Services Purchasing Management is provided to clients with a fixed or contingent fee option.
