

UMI: Your gateway to superior customer engagement

UMI is a utility data informational platform designed to provide users with the ability to review and track their aggregate utility data in as granular or global a basis they desire, while assisting in the tracking and reduction of energy use.

By monitoring each building's specific utility data, setting custom alarms, and utilizing budget tools, UMI users have a better handle on their energy use and manage their consumption more efficiently.

We developed our Utility Management Interface Platform (UMI) to better engage with our customers and provide them with an effective tool to monitor their energy consumption. UMI is an important customer focused platform, which we provide free of charge to all clients. By the same token, we are confident that utility companies can benefit from UMI to engage their customers as well.

By custom branding UMI, utility companies can provide their customers with a user-friendly tool that can assist in controlling their energy use and spend. Not only will this aid in user efficiency, but increase customer engagement with their utility companies to more of a partnership and an advocacy relationship.

Here are some of UMI's main highlights:

A look at the UMI Dashboard concisely illustrates the aggregate data customers can manage.

Customers have the ability to review their utility data in 15 minute intervals.

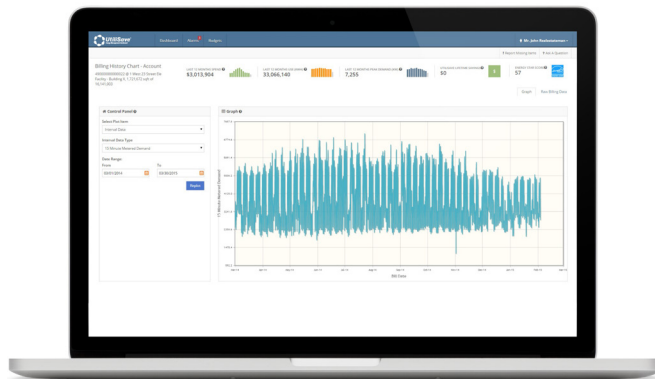

Customers can isolate incidences of energy inefficiencies.

Allow your customers to set alerts by usage or cost among their accounts, aggregate accounts, or by building or facility (multiple buildings).

Customers can set budgets by account, building, complex, or utility type—in any order—and have UMI track the results.

The future of UMI

The development continues with planned feature additions based on granular benchmarking, detailed analytics, future cost predictions and real-time data management.

UMI coupled with UtiliFind (delivering revenue enhancement, bill validation and data integrity) can help utility companies engage and build greater trust with their customers. Let us show you how.

An industry leader in utility data optimization for over **since 1991.**

Marching strong toward **\$1 billion** in found savings and refunds for our clients.

Provides core services to over **16,000** properties nationwide.

Proprietary software dives deeper to deliver **larger net returns.**

Experience in **100+** tariff jurisdictions worldwide.
